## Risk, Return and Portfolio Theory

## Question 83

A Stock costing ₹ 150 pays no dividends. The possible prices at which the stock may be sold for at the end of the year with the respective probabilities are:

| Price (in ₹) | Probability |
| :---: | :---: |
| 130 | 0.2 |
| 150 | 0.1 |
| 160 | 0.1 |
| 165 | 0.3 |
| 175 | 0.1 |
| 180 | 0.2 |
| Total | 1.0 |

## You are required to:

1. calculate the Expected Return,
2. calculate the Standard Deviation ( $\sigma$ ) of Returns.

Show calculations upto three decimal points.
(May 17, 8 Marks)

## Solution

Here, the probable returns have to be calculated using the formula

$$
\mathrm{R}=\frac{\mathrm{D}}{\mathrm{P}_{0}}=\frac{\mathrm{P}_{1}-\mathrm{P}_{0}}{\mathrm{P}_{0}}
$$

## Calculation of Probable Returns

| Possible prices $\left(\mathbf{P}_{\mathbf{1}}\right)$ <br> $₹$ | $\mathbf{P}_{\mathbf{1}}-\mathbf{P}_{\mathbf{0}}$ <br> $₹$ | $\left[\left(\mathbf{P}_{\mathbf{1}}-\mathbf{P}_{\mathbf{0}}\right) / \mathbf{P}_{\mathbf{0}}\right] \times \mathbf{1 0 0}$ <br> Return $(\mathbf{p e r}$ cent $)$ |
| :---: | :---: | :---: |
| 130 | -20 | -13.33 |
| 150 | 0 | 0.00 |
| 160 | 10 | 6.67 |
| 165 | 15 | 10.00 |
| 175 | 25 | 16.667 |
| 180 | 30 | 20.00 |

## Calculation of Expected Returns

| Possible return <br> $\mathbf{X}_{\mathbf{i}}$ | Probability <br> $\mathbf{p}\left(\mathbf{X}_{\mathbf{i}}\right)$ | Product <br> $\mathbf{X}_{\mathbf{1}}-\mathbf{p}\left(\mathbf{X}_{\mathbf{i}}\right)$ |
| :---: | :---: | :---: |
| -13.333 | 0.2 | -2.667 |
| 0.00 | 0.1 | 0.000 |
| 6.667 | 0.1 | 0.667 |
| 10.00 | 0.3 | 3.000 |
| 16.667 | 0.1 | 1.667 |
| 20.00 | 0.2 | 4.000 |
|  |  | $X=6.667$ |

Expected return $X=6.667$ per cent
Alternatively, it can also be calculated as follows:
Expected Price
$=130 \times 0.2+150 \times 0.1+160 \times 0.1+165 \times 0.3+175 \times 0.1+180 \times 0.2=160$

## Return

$=\frac{160-150}{150} \times 100=6.667 \%$
Calculation of Standard Deviation of Returns

| Probable <br> return $\mathrm{X}_{\mathrm{i}}$ | Probability <br> $\mathrm{p}\left(\mathrm{X}_{\mathrm{i}}\right)$ | Deviation <br> $\left(\mathrm{X}_{\mathrm{i}}-\overline{\mathrm{X}}\right)$ | Deviation squared <br> $\left(\mathrm{X}_{\mathrm{i}}-\overline{\mathrm{X}}\right)^{2}$ | Product <br> $\left(\mathrm{Xi}_{\mathrm{i}}-\overline{\mathrm{X}}\right)^{2} \mathrm{p}\left(\mathrm{X}_{\mathrm{i}}\right)$ |
| :---: | :---: | :---: | :---: | :---: |
| -13.333 | 0.2 | -20.00 | 400.00 | 80.00 |
| 0.00 | 0.1 | -6.667 | 44.449 | 4.445 |
| 6.667 | 0.1 | 0 | 0 | 0 |
| 10.00 | 0.3 | 3.333 | 11.109 | 3.333 |
| 16.667 | 0.1 | 10.00 | 100.00 | 10.00 |
| 20.00 | 0.2 | 13.333 | 177.769 | 35.554 |
|  |  |  |  | $\sigma^{2}=133.332$ |

Variance, $\sigma^{2}=133.332$
Standard deviation,
$\sigma=\sqrt{133.332}$
$=11.547$ per cent

## Question 84

The following information are available with respect of Krishna Ltd.

| Year | Krishna Ltd. <br> Average share price <br> $(\mathrm{Y})$ | Dividend <br> per Share <br> $(\mathrm{Y})$ | Average <br> Market <br> Index | Dividend <br> Yield | Return on <br> Govt. bonds |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 2012 | 245 | 20 | 2013 | $4 \%$ | $7 \%$ |
| 2013 | 253 | 22 | 2130 | $5 \%$ | $6 \%$ |
| 2014 | 310 | 25 | 2350 | $6 \%$ | $6 \%$ |
| 2015 | 330 | 30 | 2580 | $7 \%$ | $6 \%$ |

Compute Beta Value of the Krishna Ltd. at the end of 2015 and state your observation.
(May 2017, 8 Marks)

## Solution

## 1. Computation of Beta Value

Calculation of Returns

$$
\text { Returns }=\frac{\mathrm{D}_{1}+\left(\mathrm{P}_{1}-\mathrm{P}_{0}\right)}{\mathrm{P}_{0}} \times 100
$$

Year 2012-2013

$$
=\frac{22+(253-245)}{245} \times 100=12.24 \%
$$

## Portfolio Theory

## Incito Academy - Final CA - Strategic Financial Management

Return 12.24\%
Year 2013-2014
$=\frac{25+(310-253)}{253} \times 100=32.14 \%$
Return 32.14\%
Year 2014-2015

$$
=\frac{30+(330-310)}{310} \times 100=16.13 \%
$$

Return 16.13\%
Calculation of Returns from market Index

| Year | \% of Index Appreciation | Dividend <br> Yield \% | Total <br> Return $\%$ |  |
| :---: | :---: | :---: | :---: | :---: |
| $2012-2013$ | $\frac{(2130-2013)}{2013}$ | $\times 100=5.81 \%$ | $5 \%$ | $10.81 \%$ |
| $2013-2014$ | $\frac{(2350-2130)}{2130}$ | $\times 100=10.33 \%$ | $6 \%$ | $16.33 \%$ |
| $2014-2015$ | $\frac{(2580-2350)}{2350}$ | $\times 100=9.79 \%$ | $7 \%$ | $16.79 \%$ |

## Computation of Beta

| Year | Krishna Ltd. (X) | Market Index (Y) | XY | Y2 |
| :---: | :---: | :---: | :---: | :---: |
| $2012-13$ | $12.24 \%$ | $10.81 \%$ | 132.31 | 116.86 |
| $2013-14$ | $32.41 \%$ | $16.33 \%$ | 529.25 | 266.67 |
| $2014-15$ | $16.13 \%$ | $16.79 \%$ | 270.82 | 281.90 |
| Total | $60.78 \%$ | $43.93 \%$ | 932.38 | 665.43 |

Average Return of Krishna Ltd. $=\frac{60.78}{3}=20.26 \%$
Average Market Return $=\frac{43.93}{3}=4.64 \%$

$$
\text { Beta }(\beta)=\frac{\sum X Y-n X Y}{\sum Y^{2}-n(Y)^{2}}=\frac{932.38-3 \times 20.26 \times 14.64}{665.43-3(14.64)^{2}}=1.897
$$

## 2. Observation

|  | Expected Return (\%) | Actual Return (\%) | Action |
| :---: | :---: | :---: | :---: |
| $2012-13$ | $6 \%+1.897(10.81 \%-6 \%)=15.12 \%$ | $12.24 \%$ | Sell |
| $2013-14$ | $6 \%+1.897(16.33 \%-6 \%)=25.60 \%$ | $32.41 \%$ | Buy |
| $2014-15$ | $6 \%+1.897(16.79 \%-6 \%)=26.47 \%$ | $16.13 \%$ | Sell |

## Question 85

The five portfolios of a mutual fund experienced following result during last 10 years periods:

Incito Academy - Final CA - Strategic Financial Management

| Portfolio | Average annual <br> return \% | Standard <br> Deviation | Correlation with the <br> market return |
| :---: | :---: | :---: | :---: |
| A | 20.0 | 2.3 | 0.8869 |
| B | 17.0 | 1.8 | 0.6667 |
| C | 18.0 | 1.6 | 0.600 |
| D | 16.0 | 1.8 | 0.867 |
| E | 13.5 | 1.9 | 0.5437 |

| Market risk | $:$ | 1.2 |
| :--- | :--- | :--- |
| Market rate of return | $:$ | $14.3 \%$ |
| Risk free rate | $:$ | $10.1 \%$ |

Beta may be calculated only upto two decimal. Rank the portfolio using JENSEN'S ALPHA method.
(May 17, 8 Marks)

## Solution

Let portfolio standard deviation be $\sigma_{p}$
Market Standard Deviation $\quad=\sigma_{\mathrm{m}}$
Coefficient of correlation $=r$
Portfolio beta $\left(\beta_{\mathrm{p}}\right)=\frac{\sigma_{\mathrm{p}} r}{\sigma_{\mathrm{m}}}$
Beta for $\mathrm{A}=\frac{2.30 \times 0.8869}{1.2}=1.7$
Required portfolio return $(R p)=R f+\beta p(R m-R f)$,
$[\operatorname{Rp}$ for $A=10.1+1.70 \times(14.3-10.1)=17.24$, etc.]

| Portfolio | Beta | Return from the portfolio (Rp) (\%) |
| :---: | :---: | :---: |
| A | 1.70 | 17.24 |
| B | 1.00 | 14.30 |
| C | 0.80 | 13.46 |
| D | 1.30 | 15.56 |
| E | 0.86 | 13.71 |

| Portfolio | Actual Return <br> $\%$ | Expected Return <br> $\%$ | Jensen's Alpha |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | AR - ER | Rank |  |
| A | 20 | 17.24 | 2.76 | II |
| B | 17 | 14.30 | 2.70 | III |
| C | 18 | 13.46 | 4.54 | I |
| D | 16 | 15.56 | 0.44 | IV |
| E | 13.5 | 13.71 | -0.21 | V |

## Question 86

The return of security ' L ' and security ' K ' for the past five years are given below:

## Portfolio Theory

## Incito Academy - Final CA - Strategic Financial Management

| Year | Security-L <br> Return $\%$ | Security-K <br> Return $\mathbf{\%}$ |
| :---: | :---: | :---: |
| 2012 | 10 | 11 |
| 2013 | 04 | -06 |
| 2014 | 05 | 13 |
| 2015 | 11 | 08 |
| 2016 | 15 | 14 |

Calculate the risk and return of portfolio consisting above information.
(Nov 17, 10 Marks)
Solution 86

| Year | $\mathrm{L} \%$ | $\mathrm{~K} \%$ | $\mathrm{d}_{\mathrm{L}}=$ <br> $\mathrm{L}-\overline{\mathrm{L}}$ | $\mathrm{d}_{\mathrm{K}}=$ <br> $\mathrm{K}-\overline{\mathrm{K}}$ | $\mathrm{d}_{\mathrm{L}}{ }^{2}$ | $\mathrm{~d}_{\mathrm{k}}{ }^{2}$ | $\mathrm{~d}_{\mathrm{L}} \cdot \mathrm{d}_{\mathrm{k}}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 2012 | 10 | 11 | 1 | 3 | 1 | 9 | 3 |
| 2013 | 4 | -6 | -5 | -14 | 25 | 196 | 70 |
| 2014 | 5 | 13 | -4 | 5 | 16 | 25 | -20 |
| 2015 | 11 | 8 | 2 | 0 | 4 | 0 | 0 |
| 2016 | 15 | 14 | 6 | 6 | 36 | 36 | 36 |
|  | $\sum \mathrm{~L}$ | $\sum \mathrm{k}$ |  |  | $\sum \mathrm{d}_{\mathrm{L}}{ }^{2}$ | $\sum \mathrm{~d}_{\mathrm{K}}{ }^{2}$ | $\sum \mathrm{d}_{\mathrm{L}} \cdot \mathrm{d}_{\mathrm{K}}$ <br>  <br>  <br> $=45$ |
| $=40$ |  |  | $=82$ | $=266$ | $=89$ |  |  |

WN1: Average Rate of Return:

$$
\begin{aligned}
& \overline{\mathrm{L}}=\frac{\sum \mathrm{L}}{\mathrm{~N}}=\frac{45}{5}=9 \% \\
& \overline{\mathrm{k}}=\frac{\sum \mathrm{L}}{\mathrm{~N}}=\frac{40}{5}=8 \%
\end{aligned}
$$

WN2: Variance and Standard deviation:

$$
\sigma_{\mathrm{L}}{ }^{2}=\frac{\sum \mathrm{d}_{\mathrm{L}}{ }^{2}}{\mathrm{~N}}=\frac{82}{5}=164
$$

$\sigma_{\mathrm{L}}=\sqrt{\sigma_{\mathrm{L}}{ }^{2}}=\sqrt{16.4}=4.05 \%$

$$
\sigma_{\mathrm{k}}^{2}=\frac{\sum \mathrm{d}_{\mathrm{k}}{ }^{2}}{\mathrm{~N}}=\frac{266}{5}=53.2
$$

$\sigma_{\mathrm{k}}=\sqrt{\sigma_{\mathrm{k}}{ }^{2}}=\sqrt{53.2}=72.9 \%$
WN3: Covariance:

$$
\operatorname{Cov}_{\mathrm{Lk}^{2}}=\frac{\sum \mathrm{d}_{\mathrm{L}} \mathrm{~d}_{\mathrm{k}}}{\mathrm{~N}}=\frac{89}{5}=17.8
$$

Assuming 50\% investment in each of the two securities:

1. Return on Portfolio

$$
\begin{aligned}
& R_{p}=R_{\mathrm{L}} \cdot W_{\mathrm{L}}+\mathrm{R}_{\mathrm{K}} \cdot W_{\mathrm{K}} \\
& \mathrm{R}_{\mathrm{p}}=(9)(0.5)+(8)(0.5)=8.5 \%
\end{aligned}
$$

2. Portfolio Risk

$$
\begin{aligned}
& \sigma_{\mathrm{p}}=\sqrt{\sigma_{\mathrm{L}}^{2} \cdot \mathrm{~W}_{\mathrm{L}}^{2}+\sigma_{\mathrm{k}}^{2} \cdot \mathrm{~W}_{\mathrm{k}}^{2}+2 \operatorname{Cov}_{\mathrm{Lk}} . \mathrm{W}_{\mathrm{L} .} \mathrm{W}_{\mathrm{K}}} \\
& \sigma_{\mathrm{p}}=\sqrt{(16.4)(0.5)^{2}+(53.2)(0.5)^{2}+2(17.8)(0.5)(0.5)} \\
& \sigma_{\mathrm{p}}=\sqrt{26.3}=5.13 \%
\end{aligned}
$$

## Incito Academy - Final CA - Strategic Financial Management

## Question 87

Consider the following information on two stocks, X and Y .

| Year | 2016 | 2017 |
| :--- | :---: | :---: |
| Return on X (\%) | 10 | 16 |
| Return on Y (\%) | 12 | 18 |

You are required to calculate:

1. The expected return on a portfolio containing $X$ and $Y$ in the proportion of $40 \%$ and $60 \%$ respectively.
2. The Standard Deviation of return from each of the two stocks.
3. The Covariance of returns from the two stocks.
4. The Correlation coefficient between the returns of the two stocks.
5. The risk of a portfolio containing $X$ and $Y$ in the proportion of $40 \%$ and $60 \%$.
(May 18, 8 Marks)

## Solution

1. Expected return of portfolio containing $X$ and $Y$ in the ratio $40 \%, 60 \%$

$$
\begin{aligned}
& E(X)=\frac{(10+16)}{2}=13 \% \\
& E(Y)=\frac{(12+18)}{2}=15 \% \\
& R_{p}=\sum_{\mathrm{I}-1} X_{i} R_{i}=0.4(13)+0.6(15)=14.2 \%
\end{aligned}
$$

2. Standard Deviation of $X$ and $Y$

## Stock X:

Variance $=0.5(10-13)^{2}+0.5(16-13)^{2}=9$
Standard deviation $=3 \%$

## Stock Y:

Variance $=0.5(12-15)^{2}+0.5(18-15)^{2}=9$
Standard deviation $=3 \%$
3. $\operatorname{Cov}_{X Y}=0.5(10-13)(12-15)+0.5(16-13)(18-15)=9$
4. Correlation Coefficient $=\mathrm{p}=\quad \frac{\operatorname{Cov}(\mathrm{X}, \mathrm{Y})}{\sigma \times \sigma y}=\frac{9}{9}=1$
5. Risk of portfolio containing $40 \% \mathrm{X}$ and $60 \% \mathrm{Y}$

$$
\begin{aligned}
\sigma \mathrm{p} & =\sqrt{\mathrm{w} x^{2} \sigma_{x}^{2}+\mathrm{wy}^{2} \sigma_{Y^{2}}+2 \mathrm{w} x \mathrm{w}_{Y}\left(\sigma_{x} \sigma_{Y} \text { Cor. } . x \mathrm{Y}\right)} \\
& =\sqrt{(0.4)^{2}(3)^{2}+(0.6)^{2}(3)^{2}+2(0.4)(0.6)(3)(3)(1)} \\
& =\sqrt{1.44+3.24+4.32}=3 \%
\end{aligned}
$$

## Question 88

Mr. Kapoor owns a portfolio with the following characteristics:

## Portfolio Theory

|  | Security X | Security Y | Risk Free Security |
| :--- | :---: | :---: | :---: |
| Factor 1 sensitivity | 0.75 | 1.50 | 0 |
| Factor 2 sensitivity | 0.60 | 1.10 | 0 |
| Expected Return | $15 \%$ | $20 \%$ | $10 \%$ |

It is assumed that security returns are generated by a two factors model.

1. If Mr. Kapoor has $₹ 1,00,000$ to invest and sells short $₹ 50,000$ of security Y and purchases ₹ $1,50,000$ of security X, what is the sensitivity of Mr. Kapoor's portfolio to the two factors?
2. If Mr. Kapoor borrows ₹ $1,00,000$ at the risk free rate and invests the amount he borrows along with the original amount of ₹ $1,00,000$ in security $X$ and $Y$ in the same proportion as described in part (i), what is the sensitivity of the portfolio to the two factors?
3. What is the expected return premium of factor 2?
(Nov 18, 8 Marks)

## Solution

1. Mr. Kapoor's position in the two securities is +1.50 in security $X$ and -0.5 in security Y. Hence the portfolio sensitivities to the two factors:
b prop. $1=1.50 \times 0.75+(-0.50 \times 1.50)=0.375$
b prop. $2=1.50 \times 0.60+(-0.50 \times 1.10)=0.35$
2. Mr. Kapoor's current position:
$\begin{array}{lcl}\text { Security X } & ₹ 3,00,000 / ₹ 1,00,000 & =3 \\ \text { Security Y } & -₹ 1,00,000 / ₹ 1,00,000 & =-1 \\ \text { Risk free asset } & -₹ 100000 / ₹ 100000 & =-1 \\ \text { b prop. } 1=3.0 \times 0.75+(-1 \times 1.50)+(-1 \times 0)=0.75 & \\ \text { b prop. } 2=3.0 \times 0.60+(-1 \times 1.10)+(-1 \times 0)=0.70 & \end{array}$
3. Expected Return = Risk Free Rate of Return + Risk Premium

Let $\lambda_{1}$ and $\lambda_{2}$ are the Value Factor 1 and Factor 2 respectively.
Accordingly
$15=10+0.75 \lambda_{1}+0.60 \lambda_{2}$
$20=10+1.50 \lambda_{1}+1.10 \lambda_{2}$
On solving equation, the value of $\lambda_{1}$ and $\lambda_{2}$ comes 6.67 and 0 respectively.

Accordingly, the expected risk premium for the factor 2 shall be Zero and whatever be the risk the same shall be on account of factor 1 .

Alternatively, the risk premium of Securities X \& Y can be calculated as follows:

## Security $X$

Total Return = 15\%
Risk Free Return = 10\%
Risk Premium $=5 \%$

## Incito Academy - Final CA - Strategic Financial Management

## Security Y

Total Return $=20 \%$
Risk Free Return = 10\%
Risk Premium $=10 \%$

## Question 89

Following are the details of a portfolio consisting of 3 shares:

| Shares | Portfolio Weight | Beta | Expected Return (\%) | Total Variance |
| :---: | :---: | :---: | :---: | :---: |
| X Ltd. | 0.3 | 0.50 | 15 | 0.020 |
| Y Ltd. | 0.5 | 0.60 | 16 | 0.010 |
| Z Ltd. | 0.2 | 1.20 | 20 | 0.120 |

Standard Deviation of Market Portfolio Return = 12\%
You are required to calculate the following:

1. The Portfolio Beta.
2. Residual Variance of each of the three shares.
3. Portfolio Variance using Sharpe Index Model.
(May 19, 8 Marks)

## Solution

1. Portfolio Beta
$0.30 \times 0.50+0.50 \times 0.60+0.20 \times 1.20$
$=0.15+0.3+0.24=0.69$

## 2. Residual Variance

To determine Residual Variance first of all we shall compute the Systematic Risk as follows:

$$
\begin{aligned}
& \beta \mathrm{x}^{2} \mathrm{X} \sigma_{\mathrm{M}^{2}}=(0.5)^{2}(0.12)^{2}=0.0036 \\
& \beta \mathrm{Y}^{2} X \sigma_{M^{2}}=(0.6)^{2}(0.12)^{2}=0.0052 \\
& \beta \mathrm{z}^{2} \mathrm{X} \sigma_{M^{2}}=(1.20)^{2}(0.12)^{2}=0.0207
\end{aligned}
$$

| Residual Variance | $=$ | Total Variance |  |
| ---: | :--- | :--- | :--- |
| X | $=$ |  | Systematic Risk |
| Y | $=0.020-0.0036$ | $=$ | 0.0164 |
| Z | $=0.010-0.0052$ |  | $=0.0048$ |
|  | $0.120-0.0207$ |  | $=0.0993$ |

## 3. Portfolio variance using Sharpe Index Model

| Portfolio Variance | Systematic Risk of <br> the Portfolio$+$ | Unsystematic <br> Risk of the |
| :--- | :--- | :---: |
| Systematic Variance of <br> Portfolio | $=(0.12)^{2} \times(0.69)^{2}$ | $=0.006856$ |
| Unsystematic Variance $=0.0164 \times(0.30)^{2}+0.0048$ <br> of Portfolio  | $=0.006648$ |  |
| Total Variance | $=0.006856+0.006648$ |  |

## Portfolio Theory

$$
\text { Portfolio Variance }=\begin{gathered}
\text { Systematic Risk of } \\
\text { the Portfolio }
\end{gathered}+\quad+\begin{gathered}
\text { Unsystematic Risk } \\
\text { of the }
\end{gathered}
$$

$$
=(0.12)^{2} \times(0.69)^{2}+0.0164 \times(0.30)^{2}+0.0048 \times(0.50)^{2}+0.0993 \times(0.20)^{2}
$$

$$
=0.006856+0.006648=0.013504
$$

## Question 90

Mr. X holds the following portfolio:

| Securities | Cost (₹) | Dividend (₹) | Market Price (₹) | Beta |
| :--- | :---: | :---: | :---: | :---: |
| Equity Shares: |  |  |  |  |
| A Ltd. | 16,000 | 1,600 | 16,400 | 0.9 |
| B Ltd. | 20,000 | 1,600 | 21,000 | 0.8 |
| C Ltd. | 32,000 | 1,600 | 44,000 | 0.6 |
| PSU Bods | 68,000 | 6,800 | 64,600 | 0.4 |

The risk-free rate of return is $12 \%$
Calculation the following:

1. The expected rate of return on his portfolio using Capital Asset Pricing Model (CAPM).
2. The average return on is portfolio. (Calculation up to two decimal points)
(Nov 19, 8 Marks)

## Solution

Calculation of expected return on market portfolio ( $\mathbf{R}_{\mathrm{m}}$ )

| Investment | Cost (₹) | Dividends (₹) | Capital Gains (₹) |  |
| :--- | :---: | :---: | :---: | :---: |
| Shares A | 16,000 | 1,600 | 400 |  |
| Shares B | 20,000 | 1,600 | 1,000 |  |
| Shares C | 32,000 | 1,600 | 12,000 |  |
| PSU Bonds | 68,000 | 6,800 | $-3,400$ |  |
| $\quad \mathbf{1 , 3 6 , 0 0 0}$ |  |  |  |  |
| $\mathrm{R}_{\mathrm{m}}=\frac{11,600}{}$ |  |  |  |  |

Calculation of expected rate of return on individual security:

| Shares A | $12+0.9(15.88-12.0)$ | $=15.49 \%$ |
| :--- | :--- | :--- |
| Shares B | $12+0.8(15.88-12.0)$ | $=15.10 \%$ |
| Shares C | $12+0.6(15.88-12.0)$ | $=14.33 \%$ |
| PSU Bonds | $12+0.4(15.88-12.0)$ | $=13.55 \%$ |

Calculation of the Average Return of the Portfolio:
$=\frac{15.49+15.10+14.33+13.55}{4}=14.62 \%$

## Incito Academy - Final CA - Strategic Financial Management

## Question 91

The risk free rate of return is $5 \%$. The expected rate of return on the market portfolio is $11 \%$. The expected rate of growth in dividend of $X \operatorname{Ltd}$. is $8 \%$. The last dividend paid was ₹ 2.00 per share. The beta of $X$ Ltd. equity stock is 1.5 .
i. What is the present price of the equity stock of $X$ Ltd.?
ii. How would the price change when?

- The inflation premium increases by $3 \%$
- The expected growth rate decreases by $3 \%$ and
- The beta decreases to 1.3.
(May 18, 4 Marks)

## Solution

i. Equilibrium price of Equity using CAPM

$$
\begin{aligned}
\mathrm{E}(\mathrm{R}) & =\mathrm{R}_{\mathrm{f}}+\left(\mathrm{R}_{\mathrm{m}}-\mathrm{R}_{\mathrm{f}}\right) \beta \\
& =5 \%+1.5(11 \%-5 \%) \\
& =5 \%+9 \%=14 \% \\
\mathrm{P}_{0} & =\frac{\mathrm{D}_{1}}{\mathrm{~K}_{\mathrm{e}}-\mathrm{g}}=\frac{2.00(1.08)}{0.14-0.08}=\frac{2.16}{0.06}=₹ 36
\end{aligned}
$$

ii. New Equilibrium price of Equity using CAPM (assuming 3\% on $5 \%$ is inflation increase)

$$
\begin{aligned}
E(R) & =R_{f}+\left(R_{m}-R_{f}\right) \beta \\
& =5.15 \%+1.3(11 \%-5.15 \%) \\
& =5.15 \%+7.61 \%=12.76 \% \\
P_{0}= & \frac{D_{1}}{K_{e}-g}=\frac{2.00(1.05)}{0.1276-0.05}=₹ 27.06
\end{aligned}
$$

Alternatively, it can also be computed as follows, assuming it is 3\% in addition to 5\%

$$
\begin{aligned}
& =8 \%+1.3(11 \%-8 \%) \\
& =8 \%+3.9 \%=11.9 \%
\end{aligned}
$$

$$
P_{0}=\frac{D_{1}}{K_{e}-g}=\frac{2.00(1.05)}{0.119-0.05}=₹ 30.43
$$

Alternatively, if all the factors are taken separately then solution of this part will be as follows:
i. Inflation Premium increase by 3\%.

This raises RX to $17 \%$. Hence, new equilibrium price will be:

$$
=\frac{2.00(1.08)}{0.17-0.08}=₹ 24
$$

ii. Expected Growth rate decrease by 3\%.

Hence, revised growth rate stand at $5 \%$ :

$$
=\frac{2.00(1.05)}{0.14-0.05}=₹ 23.33
$$

## Portfolio Theory

## Incito Academy - Final CA - Strategic Financial Management

iii. Hence, revised cost of equity shall be:

$$
\begin{aligned}
& =5 \%+1.3(11 \%-5 \%) \\
& =5 \%+7.8 \%=12.8 \%
\end{aligned}
$$

As a result, New Equilibrium price shall be

$$
P_{0}=\frac{D_{1}}{K_{e}-g}=\frac{2.00(1.08)}{0.128-0.08}=₹ 45
$$

## Question 92

Following are risk and return estimates for two stocks:

| Stock | Expected returns (\%) | Beta | Specific SD of expected return (\%) |
| :--- | :---: | :---: | :---: |
| A | 14 | 0.8 | 35 |
| B | 18 | 1.2 | 45 |

The market index has a Standard Deviation (SD) of $25 \%$ and risk-free rate on treasury Bill is $6 \%$.

You are required to calculate:
i. The standard deviation of expected returns on A and B.
ii. Suppose a portfolio is to be constructed with the proportions of $25 \%, 40 \%$ and $35 \%$ in stock A, B and treasury bills respectively, what would be the expected return, standard deviation of expected return of the portfolio?
(Nov 19, 8 Marks)

## Solution

i. Total Risk = Systematic Risk + Unsystematic Risk

$$
\begin{aligned}
& \text { Unsystematic Risk }=45^{2} \\
& \text { Total Risk } \\
& =\sigma_{\mathrm{b}} \\
& =\sqrt{900+(35)^{2}} \\
& =\sqrt{2,925} \\
& =54.08 \%
\end{aligned}
$$

ii. Expected return of the portfolio

$$
\begin{aligned}
& =(0.25 \times 14)+(0.40 \times 18)+(0.35 \times 6) \\
& =12.8 \%
\end{aligned}
$$

Total Risk $=$ Systematic Risk + Unsystematic Risk
Systematic Risk $\beta \mathrm{p}^{2} \sigma^{2} \mathrm{~m}$

$$
\begin{aligned}
\beta \mathrm{p} & =0.25(0.8)+0.4(1.2)+0.35(0) \\
& =0.2+0.48+0 \\
& =0.68
\end{aligned}
$$

Systematic Risk of Portfolio

$$
\begin{aligned}
& =\sqrt{(0.68)^{2}+(25)^{2}} \\
& =\sqrt{289}
\end{aligned}
$$

Non-systematic Risk of Portfolio

## Incito Academy - Final CA - Strategic Financial Management

$=(0.25)^{2}(35)^{2}+(0.40)^{2}(45)^{2}+0$
$=76.56+324$
$=\sqrt{400.56}$

Total Risk
$=\sqrt{289+400.56}$
$=26.26$
